3) X Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)

Paper No(s)/Mail Date

Art Unit: 1653

#### **DETAILED ACTION**

1. In the preliminary amendment filed July 29, 2003, claims 2, 3, 6-8, 10, 11 and 14-27 have been cancelled, claims 1 and 12 have been amended, and new claims 28-34 have been added.

Therefore, claims 1, 4, 5, 9, 12, 13 and 28-34 are examined.

# Claim Rejections-Obviousness Type Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 4, 5 and 9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-12 of U. S. Patent 6,113,915. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 4, 5 and 9 in the instant application disclose a method for treating joint pain, the method comprising administration of a botulinum toxin to a mammal. This is obvious variation in view of claims 1-12 of the patent which disclose a method for treating pain, comprising intraspinal administration of a therapeutically effective amount of a botulinum toxin to a mammal. Both sets of claims cite a method of treating pain such as joint pain, comprising administration (e.g., intraspinal administration) of a botulinum toxin. Thus, claims 1, 4, 5 and 9

Art Unit: 1653

in present application and claims 1-12 in the patent are obvious variations of a method of treating joint pain, comprising administration of a botulinum toxin.

3. Claims 1, 4, 5, 9, 12, 13 and 28-34 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 4, 5, 9, 12, 13 and 28-32 of co-pending application 10/630,206. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 4, 5, 9, 12, 13 and 28-34 in the instant application disclose a method for treating joint pain or arthritis, the method comprising administration such as peripheral administration of a botulinum toxin to a mammal. This is obvious variation in view of claims 1, 4, 5, 9, 12, 13 and 28-32 of the co-pending application which disclose a method for treating pain, comprising administration such as peripheral administration of a botulinum toxin to a mammal. Both sets of claims cite a method of treating pain such as joint pain or arthritis pain, comprising administration such as peripheral administration of a botulinum toxin. Thus, claims 1, 4, 5, 9, 12, 13 and 28-34 in present application and claims 1, 4, 5, 9, 12, 13 and 28-32 in the co-pending application are obvious variations of a method of treating joint pain, comprising administration of a botulinum toxin.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1, 4, 5, 9, 12, 13 and 28-34 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of co-pending application 11/003,677 (amendment filed December 3, 2004). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 4, 5, 9, 12, 13 and 28-34 in the instant application disclose a method for treating joint pain or arthritis, the

Art Unit: 1653

method comprising administration such as peripheral administration of a botulinum toxin to a mammal. This is obvious variation in view of claim 1 of the co-pending application which disclose a method for treating pain, comprising peripheral administration of a botulinum toxin to a mammal, wherein the pain is not associated with a muscle spasm. Both sets of claims cite a method of treating pain such as joint pain or arthritis pain, comprising administration such as peripheral administration of a botulinum toxin. Thus, claims 1, 4, 5, 9, 12, 13 and 28-34 in present application and claim 1 in the co-pending application are obvious variations of a method of treating burn pain, comprising administration of a botulinum toxin.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 5. Claims 1, 4, 5, 9, 12, 13 and 28-34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 6. Claims 1, 4, 5, 9, 12, 13 and 28-34 are indefinite because the claims lack essential steps in the method for treating joint pain or arthritis. The omitted steps are the effective amount of a botulinum troxin used and/or the outcome of the treatment. Claims 4, 5, 9, 13, 28-30, 32 and 34 are included in the rejection because they are dependent on a rejected claim and do not correct the deficiency of the claim from which they depend.

Art Unit: 1653

7. Claim 9 is indefinite because of the use of the term "substantially alleviated". The term "substantially alleviated" renders the claim indefinite, it is not clear to what extent the pain is alleviated because neither the specification nor the claim defines the term.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

8. Claims 1, 4, 5, 9, 12, 13 and 28-34 are rejected under 35 U.S.C. 102(e) as anticipated by First (U.S. Patent 6,063,768, filing date: September 4, 1997).

First teaches a method of treating a neurogenic inflammatory disorder such as inflammatory arthritis or rheumatoid arthritis by administering a therapeutically effective amount of a botulinum toxin (e.g., sero type A, B, C, D, E, F, and G), which alleviates the unpleasant side effect of neuropathic pain that is due to the release of certain neuroinflammatory peptides and other mediators of inflammation, in response to injury/inflammation or disease (column 5, line 48-column 6, line 67), where the botulinum toxin can be administered subcutaneously or intramuscularly at or near the site of inflammation, including a joint or joints (column 7, lines

Art Unit: 1653

29-36; claims 1, 4, 5, 12, 13 and 28-34). The reference also indicates botulinum toxin has a long lasting therapeutic effect (e.g., weeks or months, column 7, lines 1-8; claim 9).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 1, 4, 5, 12, 13, 28, 29 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Aoki *et al.* (WO 95/17904).

Aoki et al. disclose a method of treating a disorder or condition such as pain related to contractures in arthritis with a botulinum toxin such as sero type A, B, C, D, E, F, and G (page 1, lines 7-16; page 5, lines 5-7; claim 18 of the WO document; claims 1, 4, 5), where the toxin can be administered by intramuscular injection into a local area or subcutaneous injection, which can deliver the toxin directly to the affected area (page 7, lines 11-20; claims 12, 13, 28, 29 and 32). Since the reference suggests the use of a botulinum toxin in treating a pain condition related to

Art Unit: 1653

contracture in arthritis, thus, at the time of invention was made, it would have been obvious to one of ordinary skill in the art to administer a botulinum toxin to an mammal for the treatment of joint pain or arthritis pain, which results in the claimed invention and was, as a whole, prima facie obvious at the time the claimed invention was made.

#### Conclusion

### 10. No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chih-Min Kam whose telephone number is (571) 272-0948. The examiner can normally be reached on 8.00-4:30, Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon Weber can be reached at 571-272-0925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
